

EDWARD SONG

CTO | TECHNICAL LEAD | PRODUCT ENGINEER

Northern New Jersey / NYC Metro | (201) 669-7377 | edwardsong08@gmail.com

LinkedIn: linkedin.com/in/edward-y-song | GitHub: github.com/edwardsong08 | Portfolio: edsong.xyz

Hands-on CTO and product engineer who builds secure, self-hosted platforms and workflow systems for organizations with complex operational needs. Bridges product judgment, technical leadership, application engineering, infrastructure, security, and production ownership.

CORE CAPABILITIES

Leadership: technical direction, product strategy, requirements, team coordination, stakeholder translation

Systems and security: workflow systems, RBAC, secure intake, auditability, performance, operational governance

Engineering: TypeScript/JavaScript, PHP, Go, Python, Java, SQL; React, Next.js, Spring Boot

Infrastructure and operations: Linux, Proxmox, Coolify, Cloudflare, Docker, GitHub Actions, self-hosting, Kubernetes migration planning

EXPERIENCE

Chief Technology Officer, Volunteer

The Realms of Asgard, Inc. | Feb 2026 - Present | Promoted from Software Engineer to Senior Software Engineer, Interim CTO, and CTO

- Led technology across product/design, software, data, network engineering, and IT operations teams as the primary software and systems owner for a 50+ volunteer organization and 800+ member community.
- Built and operated the organization's live platform ecosystem: main, admin, ticketing, and careers sites; an extensive Space Engineers map and plugin portfolio; open-source internal platforms; servers, backups, game hosting, bots, and AI tools.
- Reduced recurring third-party operating costs by bringing core platforms, tooling, hosting, backups, and game infrastructure in-house while maintaining secure, fast, and efficient production operations.
- Established SOPs, source-of-truth practices, access controls, deployment workflows, and AI-assisted administrative systems, including shared-drive tooling and real-time volunteer crisis-response workflows.

Technical Lead, Contract

Ryu Legal | Aug 2022 - Present

- Own the technical environment behind a production legal-services organization, spanning servers, networking, hosting, security, performance, DevOps, custom software, and operational tooling.
- Led SEO and site-performance improvements that contributed to a 30%+ increase in client inquiries, then expanded into secure intake, internal utilities, integrations, and broader technical operations.
- Select, adapt, and integrate open-source software when it improves reliability, security, cost, or operational capability.

Product Lead

Legal Technology Startup | Sep 2021 - Aug 2023

- Converted complex U.S. immigration-service operations into product requirements, decision trees, user journeys, wireframes, and implementation-ready workflows.
- Designed intake, eligibility triage, document collection, milestone tracking, and attorney-client matching experiences around real operational constraints and user needs.

SELECTED WORK

- **Main Hub | Public systems showcase:** Built an interactive systems map that organizes projects, services, infrastructure, statuses, and relationships across a broader technical ecosystem.
- **TROA Gaming Systems, Division 2:** Built and operated more than a dozen Space Engineers plugins alongside an extensive map, server, and community-tooling portfolio.

ADDITIONAL

Earlier experience (2014-2025): Legal operations, education/admissions consulting, and professional writing.

Selected education: University of Michigan, Ann Arbor - Engineering coursework; Penn State - Political Science coursework.

Prior cloud experience: AWS EC2, RDS, and S3.

Languages: Korean and English.
